Kobe Steel Japan and Virgo Group

Kobe Steel and Virgo Group have entered into a consultancy agreement for the Indian market. The agreement is focused on business opportunities in India for Kobe Steel Japan focused on the Forging and Casting industry.

The Indian forging industry is seeing a lot of traction due to the growing Power Generation industry, India today has a production capacity of 35K MW annually. The growth in the steel sector which is expected to reach a capacity of 100 million tons shortly is another huge opportunity.

Kobe Steel's steel castings and forgings have earned an outstanding reputation in international markets. In addition to marine crankshafts and propeller shafts, we supply rotor shafts and turbine blades to the power generation industry and manufacture a wide range of metal molds for plastics. The company also manufacture's corrosion- and wear-resistant steel cylinders for use in extruders and injection-molding machines, and materials for cutting tools employing hot isostatic pressing (HIP) technology.

Virgo Group is over a forty year old consultancy cum marketing group with deep rooted relations in the Japanese industry. The relationship between both these companies goes back over two decades. Apart from the Casting and Forgings industry, Virgo Group is also present in the Steel / Power Generation / Aerospace / Railways and the automotive industry.
